Spotify Open Recommendation Engine

Sprint Review | Team Spotify Squad
Sprint 1 | 6 October 2021 ~ 19 October 2021

Actions to stop doing:

- Stop having Sunday standup meetings at 10:30AM (decidedly not preferred by several people)
  - → moved to Sunday noon

Actions to start doing:

- Communication - the more, the merrier!
- Pre-add more tasks + backup tasks (to the **product backlog**)
  - Everyone works at a different pace; it's good to always have items for folks to work on, time permitting
- Hop in voice channel on Discord when working on the project so that others can join in for work sessions

Actions to keep doing:

- Have people "sign up" for tasks (PowerPoint slides, coding/design tasks)
- Let folks present their work at the TA meeting
- Coordinate & track work via Trello and Discord, checking in at stand-up
- Schedule ad-hoc meetings / work sessions to work on things with people

Work completed:

- [FE] Create wireframes (landing page, etc)
- [BE] Set up web hosting
- [BE] Spotify login/auth script
- [FE] Create home page (new)

Work not completed:

- [FE] Search interface

- ○ → Design encompassed by [FE] Create wireframes; implementation superseded by [FE] Create home page
- [BE] Investigate get_recommendations endpoint
    - ○ → … for future reference, this isn't in a "proper" user story/task format; we did learn about the API interaction with tokens, though

Work Completion rate:
- Stories completed: **4**
- Days in Sprint 1: **14**
- Average stories completed/day: **0.29**
